---

**Villages and communities**
- New arrivals are received and disinfected at the reception centre
- There was an accident during one of the rainy days, where a tree fell on one of the volunteers from the water treatment plant but on a good note, he received treatment using the insurance and support from IFRC

---

**Gaps and recommendations**
- Ebola Preparedness remains weak in Kyangwali especially Kikuube being a new district and therefore not yet well facilitated. This increases vulnerability.
- The shelter challenge is escalating for both office and accommodation (tents) especially during this rainy season. Further, with the existing shelter, the safety of the new equipment cannot be guaranteed.
- For Ebola preparedness, we continue to seek opportunities that do not have financial implications so that it is easy to enhance specific interventions to curb outbreaks.
- All actors for the operation have acknowledged the shelter challenge and massive efforts are on to ensure a solution is secured soonest.
